

HEALTH AND SAFETY CONSIDERATIONS

Train safely and effectively

inner.i's interactive VR training offers the perfect way to learn new skills and advance your personal development in a clean, hygienic environment, and with consideration for contact restrictions.

sensory & safe

Your preconfigured pair of VR goggles will arrive, clean and pristine, with detailed instructions on how to disinfect and handle them after each session according our specially developed cleaning protocol. For health and safety purposes, we recommend up to five regular users per pair of goggles.

While your pair of VR goggles may be used as easily at the office as at home, we suggest you find a quiet, private space to immerse yourself in an inner.i training session. Bustling open-office plans can often prove distracting.

mindful & meaningful

At inner.i we are motivated by the concerns of the post-pandemic learner. Our virtual courses are designed to effectively replace in-person training needs at a time when learning together physically is not always possible. VR provides a whole-body experience well-suited to learning team-building skills and improving interpersonal communications through digital immersion. We believe our concept is thus on par with, and in many cases preferable to more traditional in-person training.
